

COURSE ABSTRACT

Cúram Action View Technical Overview

CUR120

Course Description

Cúram Action View is an optional feature that provides a single, person-centric summary page that brings together the most relevant client information and enables workers to take action in context. Action View is built using modern web technologies and is designed to be configurable and customizable.

This short course explains the purpose and benefits of Action View and provides an overview of how it works. It also introduces the Action View development environment and explains how it is used to configure and customize Action View features.

The course includes recorded lessons, demonstrations, and a course guide for future reference.

General Information

Delivery Method: Self-paced.

Audience: This course is intended for technical staff who need an understanding of Cúram Action View, including Technical Architects, Technical Leads, Developers, and QA team members.

Topics: The course covers the following topics:

- Purpose of Cúram Action View.
- Development and runtime architecture.
- Development, configuration, and customization approach.
- Data access concepts.
- Reference and learning resources.

Learning Objectives:	After completing the course, learners should be able to: • List the key business features provided by Cúram Action View. • Describe the development and runtime architectures of Cúram Action View. • Outline key considerations for deploying Cúram Action View. • Identify the assets provided with Cúram Action View. • Summarize the purpose of the technologies used to develop Cúram Action View features. • Explain the use of Storybook for developing Action View features. • Explain how and where Cúram Action View components can be customized. • Describe how Cúram Action View retrieves real and mock data. • Outline the approach to upgrading Cúram Action View. • Outline localization and accessibility considerations for Action View development. • Identify the documentation, training, and technical resources available to learn more about Cúram Action View.
Prerequisites:	A basic technical understanding of Merative Cúram is required. For example, completion of the <i>Merative Cúram Technical Overview</i> course.
Duration:	2 Hours
Skill Level:	Basic
Version:	This course was originally developed for Cúram Action View 1.2. For information about significant changes in later releases, refer to the course addendum.

Course Agenda

Course Introduction

Duration: 2 minutes

- Learning objectives: After completing this lesson, learners should be able to:
- List the course prerequisites, objectives, and resources.

Lesson 1 – Introduction to Cúram Action View

Duration: 9 minutes

- Learning objectives: After completing this lesson, learners should be able to:
- Describe the purpose of Cúram Action View.
 - Summarize the benefits of Cúram Action View.
 - Identify the key features of Cúram Action View.

Lesson 2 – Action View Architecture

Duration: 11 minutes

- Learning objectives: After completing this lesson, learners should be able to:
- Describe the position of Cúram Action View within the overall Cúram development architecture.
 - Trace the end-to-end runtime execution flow of Cúram Action View from browser request to backend response.
 - Outline performance considerations when deploying Cúram Action View.

Lesson 3 – Getting Started with Action View Development

Duration: 10 minutes

- Learning objectives: After completing this lesson, learners should be able to:
- Identify the assets, tools, and resources provided with Cúram Action View.
 - Describe the roles of the curam-customizable-ui-starter-pack and curam-customizable-ui-framework.
 - Outline the process for installing and setting up a Cúram Action View development environment.
 - Describe the overall implementation approach.
 - List technologies used to develop Action View features.

Lesson 4 – Customizing and Extending Action View

Duration: 15 minutes

- Learning objectives: After completing this lesson, learners should be able to:
- Describe the structure and composition of an Action View page.
 - Navigate Storybook to locate and examine Action View components.

- Explain how styling is applied and managed within Action View.
- Describe how Action View components can be configured and customized.

Lesson 5 – Data Services and Integration

Duration: 9 minutes

Learning objectives: After completing this lesson, learners should be able to:

- Describe how Action View accesses and uses data.
- Outline how to use OOTB REST APIs and define custom APIs.
- Explain the role of GraphQL in retrieving data for the Cases and Entitlement card.
- Describe how the Mock Data Service is used to provide data during development and testing.
- Explain the purpose of the Action View Notification System.

Lesson 6 – Additional Development Considerations

Duration: 7 minutes

Learning objectives: After completing this lesson, learners should be able to:

- Describe key considerations when developing Action View components, including internationalization and accessibility.
- Outline the high-level approach to upgrading a Cúram Action View solution.
- Identify the documentation and technical resources available to support Action View development.
- Describe recommended next steps for learning and developing with Cúram Action View.

Course Conclusion

Duration: 1 minute

Learning objectives: After completing this lesson, learners should be able to:

- Revisit the course objectives.
- Prepare to check your understanding of Action View.
