COURSE ABSTRACT

Cúram Action View for Developers

CUR121

Course Description

Cúram Action View is an optional feature that provides a single, person-centric dashboard page that brings together the most relevant client information and enables workers to take action in context. Action View is built using modern web technologies and is designed to be configurable and customizable.

This course builds on the foundational courses - Cúram Action View Functional Overview and Cúram Action View Technical Overview – to offer developers an explanation of how to configure the existing default Action View page, plus how to build new content and include it into the page.

The course includes the training presentation and a virtual lab environment in which to perform exercises.

General Information

Delivery Method: Self-paced or Classroom Instructor-led.

Audience: This course is intended for technical staff who need an understanding of Cúram Action View, including Technical Leads and Project Developers.

Topics: The course covers the following topics:

- Review of Action View's architecture and approach to customization
- A detailed look at Storybook
- How to deploy changes to the developer's local environment
- How to modify the Grid Layout that determines Tile placement
- Customizing existing Cards
- The Data Service Architecture
- How to define a new Card
- Using the Mock Data Service

- Localization
- Additional Considerations

Learning Objectives: After completing the course, learners should be able to:

- Review the architecture of the Cúram Action View solution.
- Summarize the broad approach for customizing Cúram Action View.
- Navigate Storybook to work out what to customize and how.
- Deploy changes into the Cúram Dev Environment.
- Modify which Cards Cúram Action View displays.
- Change the layout arrangement of Cards that Cúram Action View shows.
- Modify Card design and contents.
- Create new Cards and render them within the Dev Environment.
- Configure new Mock Data and render it in the new Card.
- Apply localization settings to Components.
- Identify performance problems by understanding what can affect it
- Apply best practices for accessibility
- Troubleshoot problems with Action View at Runtime
- Manage Curam Action View security to avoid problems

Prerequisites: Students should have completed the following courses:

- CUR117 Cúram Action View – Functional Overview
- CUR120 Cúram Action View – Technical Overview

Additionally, students should have a working knowledge and experience of Cúram Application Development Environment plus development experience in JavaScript and React.

Duration: 8 Hours

Skill Level: Advanced

Version: This course was originally developed for Cúram Action View 1.2. For information about significant changes in later releases, refer to the course addendum.

Course Agenda

Course Introduction

Learning objectives: After completing this lesson, learners should be able to:

- List the course prerequisites, objectives, and resources.

Lesson 1 – Review of Cúram Action View Architecture

Learning objectives: After completing this lesson, learners should be able to:

- Describe what Action View consists of
- Describe where it fits within the overall Cúram platform
- Explain the flow of execution when Action View is invoked

Lesson 2 – Review of the Approach to Customization

Learning objectives: After completing this lesson, learners should be able to:

- Describe how customizations are made to Action View

Lesson 3 – A closer look at Storybook

Learning objectives: After completing this lesson, learners should be able to:

- Define the typical use of Storybook by the developer
- Explain how it is employed to implement changes to an Action View installation

Exercise 1 – Explore Storybook

Lesson 4 – Deploy changes to your local Environment

Learning objectives: After completing this lesson, learners should be able to:

- Build Action View in the local environment
- Deploy to a local Cúram installation
- Verify the install

Exercise 2 – Deploy Cúram Action View

Lesson 5 – Modify the existing Grid's Tiles

Learning objectives: After completing this lesson, learners should be able to:

- Explain the Grid Layout system used in Action View
- Modify the Grid Layout to show or hide specific Tiles
- Use the Grid Configuration Builder to change the Grid Layout

Exercise 3 - Hide a Card

Exercise 4 – Modify the Grid Layout

Lesson 6 – Customizing Existing Cards

Copyright 2026 Merative.

Learning objectives: After completing this lesson, learners should be able to:

- Explain the options for customizing an existing Card based on Storybook information
- Perform a simple customization of the Cases and Entitlements Card

Exercise 5 – Customize the Cases and Entitlements Card

Lesson 7 – The Data Services Architecture

Learning objectives: After completing this lesson, learners should be able to:

- Explain Action View's approach for connecting to Data Services
- Describe the pre-built Data Service Modules available in CAV

Exercise 6 – Explore Data Services Configuration

Lesson 8 – Defining a new Card

Learning objectives: After completing this lesson, learners should be able to:

- Explain the process for adding a new Card to CAV
- Implement a new Card

Exercise 7 – Create a new Card

Lesson 9 – Using the Mock Data Service

Learning objectives: After completing this lesson, learners should be able to:

- Describe the Mock Data Service provided within CAV
- Configure your new Card to use Mock Data

Exercise 8 – Configure the new Card to use Mock Data

Lesson 10 – Localization

Learning objectives: After completing this lesson, learners should be able to:

- Describe Action View's support for localization
- Perform configuration to add new language values for CAV components

Exercise 9 – Update Translations of Action View Components

Lesson 11 – Additional Considerations

Learning objectives: After completing this lesson, learners should be able to:

- Describe Action View's support for localization
- Perform configuration to add new language values for CAV components

Exercise 10 (Optional) – Display the Emails Tile in your Cúram Application
